

SSA and SoilCQuest Presents:

# Building Trust in Soil Carbon

Myth-busting and integrity through training and accreditation

A conversation with soil carbon industry leaders: Mr Edward Scott CPSS, Mr Guy Webb, Dr Adam O'Toole, Dr Susan (Suzie) Orgill.

Australian agricultural soils offer significant carbon sequestration potential, but unlocking this requires managing complex risks and the 25-year permanence requirement. Overcoming industry uncertainty and building producer trust requires reliable, evidence-based guidance.

To address this, Soil Science Australia (SSA) developed the Registered Soil Practitioner- Soil Carbon (RSP-SC) specialty accreditation, certifying advisors to provide credible, risk-aware soil carbon services. Additionally, non-profit organisation SoilCQuest has created the online Masterclass in Growing Soil Carbon, mapped against the RSP-SC standards, as a practical learning pathway toward this accreditation.

This collaborative webinar will explain these initiatives, microbial carbon pathways, and practice changes needed to manage soil carbon dynamically and responsibly.
